SUMMARY

Hey there, I am Muhsin, studying Artificial Intelligence at Johannes Kepler University Linz. Most of my skills are self-taught, and I like to build end-to-end ML systems. I'm the kind of person who learns by building, so I pick projects that feel relevant or exciting. I'm not really a front-end guy, but I can handle minimal UI when it's needed for ML. Outside of tech, I like being close to nature, spending time with cats, working out at the gym, thrifting.

EDUCATION

Bachelor of Science in Artificial Intelligence — Johannes Kepler University Linz

2025 - Ongoing · Linz, Austria

Focus on data science, machine learning, and mathematics.

High School Diploma – Computer Science — PPMHSS KOTTUKKARA

2020 - 2022 · Kerala, India

c,c++ Basics, DSA Basics, DBMS Basics, Web Development Basics

CERTIFICATIONS

Machine Learning Zoomcamp — DataTalks Club

2025 - Ongoing · Online Bootcamp

Practical ML, deployment, cloud, and MLOps.

PROJECTS

Gmail Automation Tool: AI-Powered Email Management

A Python-based Gmail automation tool that uses local LLMs via Ollama to intelligently summarize emails and generate automated reply drafts. Combines Gmail API with Mistral 7B for streamlined email management, content cleaning, and AI-powered productivity features.

<https://github.com/Muhsiinn/Gmail1>

Offline Wiki: RAG-Powered Knowledge Base

A fully offline Wikipedia/Wikivoyage search system with intelligent Q&A capabilities. Built with FAISS vector search, Sentence Transformers for embeddings, and Ollama for natural language generation. Access thousands of articles about European destinations without an internet connection.

https://github.com/Muhsiinn/Offline_wiki

Jonas: Your Personal Austrian German Tutor

Meet Jonas, a friendly AI chatbot designed to be your personal guide to Austrian German and culture. I built Jonas to be more than just a language app; he's a conversational partner who makes learning feel like chatting with a local. Using a fine-tuned language model and a Retrieval-Augmented Generation (RAG) system I built with FAISS, Jonas can answer your questions about Austria, explain grammar in a simple way, and teach you everything from classic phrases to modern slang.

<https://github.com/Muhsiinn/Jonas>

Song popularity predictor

Implemented linear regression to predict song popularity, created synthetic data

<https://github.com/Muhsiinn/Song-Popularity-Predictor->

Whatsapp Bot

simple whatsapp built using twilio

<https://github.com/Muhsiinn/Whatsapp-Bot>

SIMCLR implementation on medical dataset

Self supervised learning implementation on medical dataset

Austrian Food Price Analysis & Email Automation

Analyzed Austrian food price indices (Producer Price Index vs Consumer Price Index) using Python (NumPy, Pandas).

<https://github.com/Muhsiinn/Austrian-food-price-analysis/tree/main>

Sales Report Automation

Raw data to insights: Automated sales report generation using Python (Pandas, Matplotlib) and email dispatch.

<https://github.com/Muhsiinn/sales-report-automation>

Malaria Cell Image Classification (CNN)

Classified malaria-infected vs healthy cells using Convolutional Neural Networks (CNN) in Python (TensorFlow, Keras).

<https://github.com/Muhsiinn/Malaria-Cell-Image-Classification-with-CNN>

Klinikum Report Editor

A comprehensive Flask web application for managing mental health report data with customizable fields, interactive graphs, and PDF export functionality.

https://github.com/Muhsiinn/med_data
